

# Bioregulatory Health System

'Illness-oriented' conventional medicine has been strongly challenged by increasing demands for a health-centred medical approach. To improve health we need a new system of genuine health care, which is therapeutically effective, scientifically sound and financially viable. The Bioregulatory Health System was born out of that challenge, preserving an innovative spirit and vitality that characterises the art of medicine.

## Bioregulatory Health System Provides:

-  **Therapy** for those with existing health problems
-  **Prevention and Stress Release** for strengthening health and preventing manifestation of illnesses
-  **Cosmetic Rejuvenation** for those opting for alternatives to surgical facelift or Botox
-  **Laboratory Analysis** for evaluation of nutritional deficiencies, environmental toxicities, oxidative stress and similar analysis from *Biolab* and *Doctors Laboratories*
-  **Networking** between bioregulatory doctors and therapists orchestrated by International Society for Bioregulatory Medicine (ISBM), a fast growing network that also organises education in Bioregulatory Medicine in the UK and abroad
-  **Education run** by British Academy for Bioregulatory Medicine (BABM) in the form of long courses of a postgraduate nature, and short courses and seminars that attract CPD points
-  **Research** in Bioregulatory Medicine
-  **Publishing** material regarding Bioregulatory Medicine, including the British Homoeopathic Formulary (BHF)

All clinical facilities regarding regenerative, preventative and aesthetic bioregulatory treatments are provided by Biomedic Centre (for more information please see: [www.biomedic.co.uk](http://www.biomedic.co.uk)) which is also a teaching clinic for Biomedic Foundation activities. The charity runs all educational, networking, research and publishing activities necessary for the further development of Bioregulatory Medicine.
